No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1984 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 28

NUMBER 1, MARCH 1984

CLYDE H. COOMBS AND PAUL E. LEHNER. Conjoint Design and Analysis of the Bilinear Model: An Application to Judgments of Risk 1

ALEX CHERRY WILKINSON AND RONALD KOESTLER. Generality of a Strength Model for Three Conditions of Repeated Recall 43

JEAN-PAUL DOIGNON, ANDRÉ DUCAMP, AND JEAN-CLAUDE FALMAGNE. On Realizable Biorders and the Biorder Dimension of a Relation 73

PETER WAKKER. Cardinal Coordinate Independence for Expected Utility 110

BOOK REVIEW

A. A. J. MARLEY. A review of *Psychology and Mathematics. An Essay on Theory* by Clyde H. Coombs 118

NUMBER 2, JUNE 1984

DAVID BIRCH. A Model of Fixed Activation Time Scheduling 121

DENNIS H. GENSCH AND JOSEPH A. SVESTKA. A Maximum Likelihood Hierarchical Disaggregate Model for Predicting Choices of Individuals 160

BRUCE W. CARLSON. Response Mode and Choice Consistency: A Test of Unfolding Theory 179

ALAIN CHATEAUNEUF AND JEAN-YVES JAFFRAY. Archimedean Qualitative Probabilities 191

THOMAS L. SAATY AND LUIS G. VARGAS. Inconsistency and Rank Preservation 205

BOOK REVIEW

JOHN MACNAMARA. Faithful Account of a Stewardship. A review of *Mental Models: Towards a Cognitive Science of Language, Inference, and Consciousness* by Philip N. Johnson-Laird 215

NUMBER 3, SEPTEMBER 1984

RICHARD SCHWEICKERT AND GEORGE J. BOGGS. Models of Central Capacity and Concurrency 223

EDGAR ASCHER. The Case of Piaget's Group INRC 282

ROBERT E. JENSEN. An Alternative Scaling Method for Priorities in Hierarchical Structures 317

PRODIP SEN. Individual Autonomy in Organizations 333

Book Review

Sharon L. Weinberg. A review of *Multidimensional Scaling* by M. L. Davison 351
Announcement 357

Number 4, December 1984

James T. Townsend. Uncovering Mental Processes with Capacity and Concurrency 363
Bruce Bloxom. Estimating Response Time Hazard Functions: An Exposition and Extension 401
Cees H. Elzinga. Sensitivity in Spectral Structures 421
Roger M. Cooke and Henk Draaisma. A Method of Weighing Qualitative Preference Axioms 436
K. H. Kim and F. W. Roush. Group Relationships and Homomorphisms of Boolean Matrix Semigroups 448
Bruce S. Buchanan and Donald G. Morrison. Optimal Design of Parity Tests 453
Piet de Jong. A Statistical Approach to Saaty's Scaling Method for Priorities 467

Book Review

Lola L. Lopes. A review of *Psychological Decision Theory* by Józef Kozielecki 479

Announcements 485

Author Index for Volume 28 488

INFORMATION FOR AUTHORS

The *Journal of Mathematical Psychology* publishes Research Articles, Monographs and Reviews, Notes and Comments, and Book Reviews in all areas of mathematical and theoretical psychology. Empirical research is welcomed when it is directly relevant to theoretical questions within psychology. The submission of papers concerned with the development or experimental testing of psychological *process models* is especially encouraged. Work in the area of fundamental measurement continues to be of interest to the Journal. Some example target areas for this journal are (1) perception and/or psychophysics, (2) work in fundamental measurement or scaling, (3) psychometric research if tied to explication of psychological concepts or process models, (4) artificial intelligence and computer simulation (e.g., computational vision as applied to human vision) of psychological processes, (5) learning and memory, (6) motivational dynamics, (7) neuropsychological theories, (8) psycholinguistics, (9) problem solving, and (10) human factors and human-computer interaction.

Manuscripts should be submitted (in quadruplicate) to *Journal of Mathematical Psychology*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Mathematical Psychology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Research articles, monographs, and reviews will be reviewed by at least two referees. Ordinarily, a Note or Comment will be reviewed by at least one referee although the Editor may accept or reject these unilaterally. Book reviews will be solicited by Dr. A. A. J. Marley. Each manuscript will be reviewed by an appropriate member of the Board of Editors who will select referees to assist him. Referees have the option of remaining anonymous to authors. Board members will correspond directly with the authors of accepted manuscripts which require revision. Rejected manuscripts, however, will be handled by the Editor, Dr. James T. Townsend. An article will not be considered in press until the author receives a letter so stating from the Editor.

Form of Manuscript. Manuscripts should be prepared on high quality bond paper with wide margins using double spacing throughout. At least four copies should be submitted, each copy to include all figures and tables. Each page of the manuscript should be numbered. The first page should contain the article title, author's name and affiliation. At the bottom of this page list the name and complete mailing address of the person to whom proofs are to be sent. The second page should contain an abstract.

Authors are requested to follow the instructions given by the *Publication Manual of the American Psychological Association*, 3rd edition, 1983. Certain modifications are listed below.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Limit numbering only to those equations that are in the main stream of the mathematical development. Refer to equations as Eq. (3) or simply (3), except at the beginning of a sentence when the word Equation should be spelled out. Equations should be punctuated to conform to their place in the syntax of the sentence.

Abbreviations and Symbols. Please do not use the abbreviations *S*, *E*, and *O* for subject, experimenter and observer. Also do not underline symbols in text or formula, for they will be routinely set in italics. A typewritten list of identified symbols *must* be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Do not use final periods with units of measure that are abbreviated (cm, s, kg, etc.) in text or in tables, except for "in." (inch).

Figures and Tables. All illustrations are to be considered as figures, and each graph or drawing should be numbered in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 6 3/4 inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double spaced) above the table. Footnotes to tables should be identified by superscript letters and placed at the bottom on the page containing the table. Footnotes in the text and title should be identified by superscript numbers and listed consecutively on a separate page.

References. Literature references in the text should be cited by author's surname and the year of publication, e.g. Roe (1980); Roe *et al.* (1981); Roe and Jones (1983, p. 150) (for references to a specific page). If a reference has more than two authors, the citation includes the surnames of all authors at the first mention, but later citations of the same reference include only the surname of the first author and the abbreviation "*et al.*" Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g. (Roe, 1980a, 1980b). Literature citations in the bibliography should be arranged alphabetically according to the surname of the author. Journal titles should be written out in full rather than abbreviated. Please note style of capitalization and punctuation for journal articles, books, and edited books in the following examples :

TVERSKY, A., RINOTT, Y., & NEWMAN, C. M. (1983). Nearest neighbor analysis of point processes: Applications to multidimensional scaling. *Journal of Mathematical Psychology*, **27**, 235-250.

PURI, P. S. (1979). On certain problems involving nonidentifiability of distributions arising in stochastic modeling. In J. S. Rustagi (Ed.), *Optimizing methods in statistics* (pp. 403–418). New York: Academic Press.

NORMAN, M. F. (1977). *Markov processes and learning models*. New York: Academic Press.

Proofs and Reprints. Proofs will be sent to the author, with reprint order forms. Authors will be charged for alterations in excess of 10 % of the cost of composition. Fifty reprints of each article will be provided free of charge.
